Modernize Your Data Platform – A Hybrid Approach

Choosing the right architecture and platform

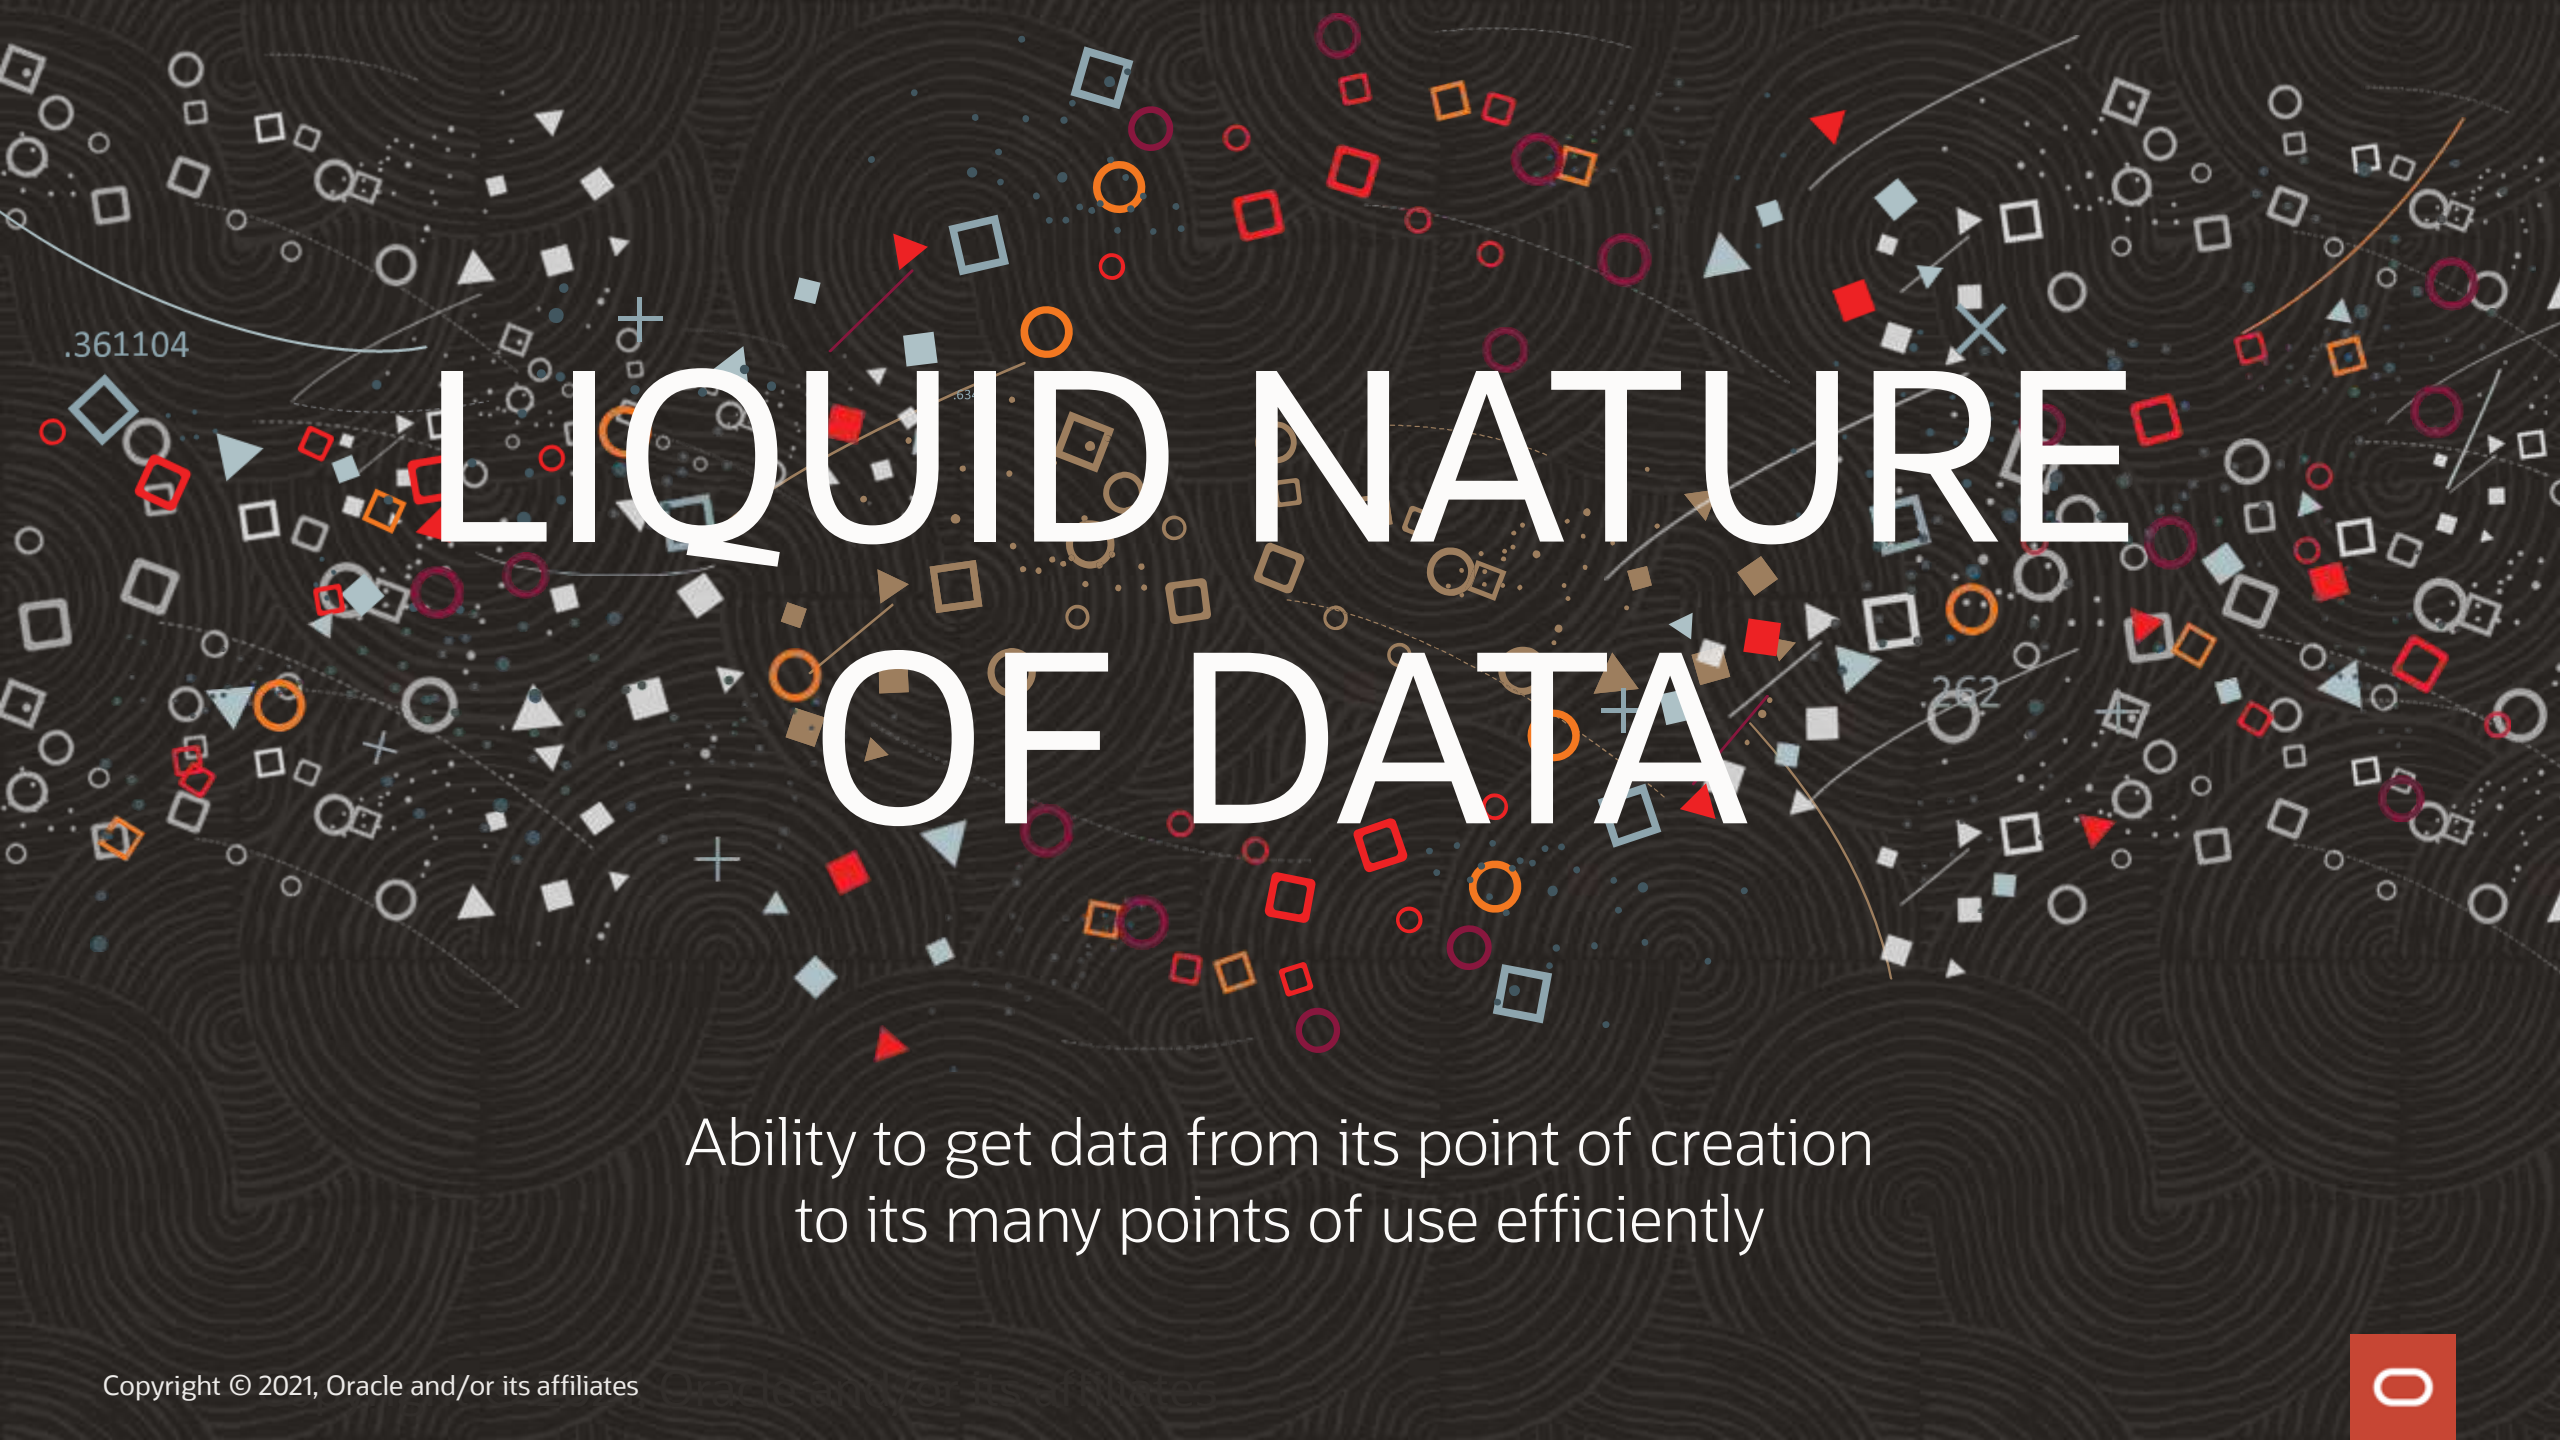

Matthew Huang

Principal Solution Engineer

Hybrid Cloud Systems, Oracle Taiwan

The following is intended to outline our general product direction. It is intended for information purposes only, and may not be incorporated into any contract. It is not a commitment to deliver any material, code, or functionality, and should not be relied upon in making purchasing decisions. The development, release, timing, and pricing of any features or functionality described for Oracle's products may change and remains at the sole discretion of Oracle Corporation.

The background features a dark grey field with numerous concentric, slightly irregular circles in a lighter grey tone. Scattered across this field are various geometric shapes: squares, circles, triangles, and diamonds. Some of these shapes are solid colors like red, orange, blue, and grey, while others are white outlines. Some shapes appear to be part of larger, fainter patterns or trajectories. In the upper left, the number ".361104" is visible, and in the middle right, "262" is partially visible.

LIQUID NATURE OF DATA

Ability to get data from its point of creation
to its many points of use efficiently

LIQUID NATURE OF DATA

Build scalable
data-driven apps

Derive value
from data

Leverage modern
data infrastructure

Resilience and availability

Manageability

Data Driven Apps Can be Complex to Develop, Deploy and Manage

- Developer fragmentation due to proprietary APIs
- Data consistency fragmentation as change propagation is difficult
- Fragmented security and management across databases

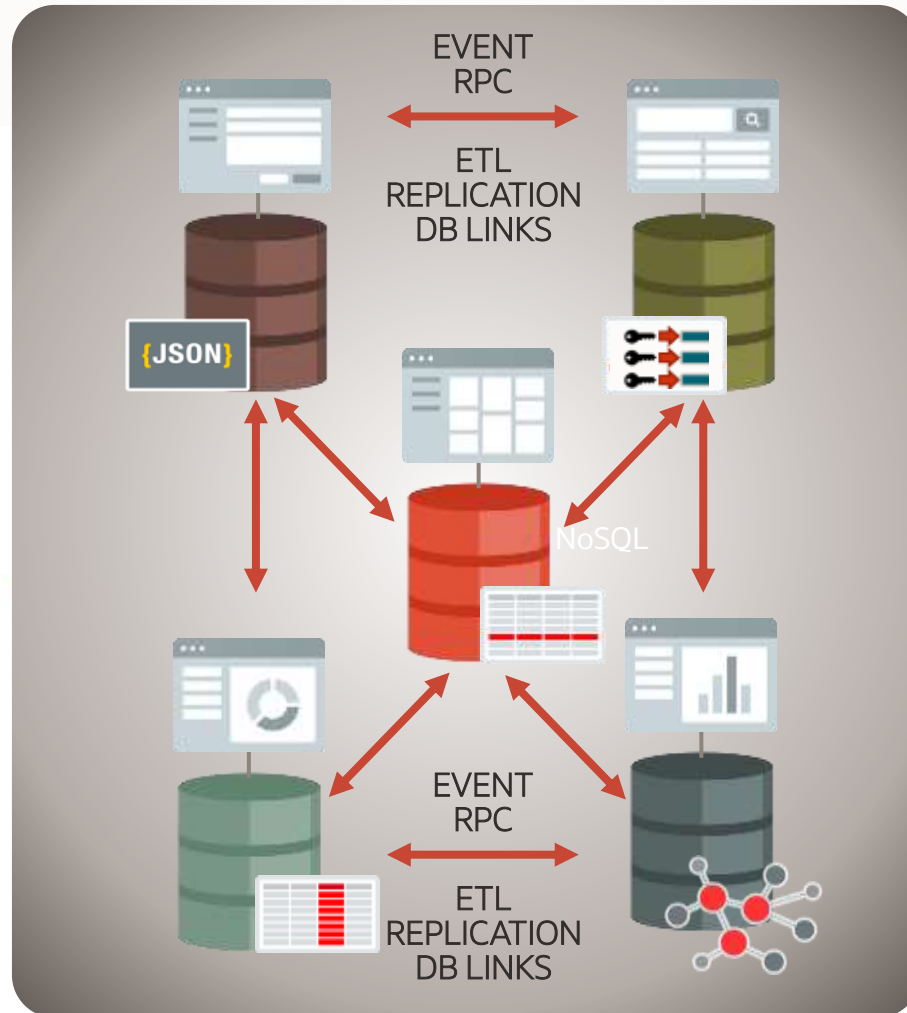

Fragmentation vs. Convergence

Single Purpose versus Multiple Purpose devices

Single Model vs Multi-Model Database

Fragmentation vs Convergence

Today's Enterprise Architectures are Generic in Nature.
Complex, Expensive, Slow & Unreliable.

Exact Cloud Equivalents Should Need Arise

Cloud insurance enables you to move forward today with confidence

Oracle Exadata: The Best Platform for the Oracle Database

A converged database on a single platform dramatically reduces complexity and cost

- Uniquely optimized for multi-model applications and analytics
- Built-in ML/AI,
 - Run ML algorithms inside the database
 - AI automated performance management
- Extreme performance, availability and security
- Scale out design
- Perfect platform for database consolidation
- Available on premise, Cloud@Customer and Oracle public cloud

Exadata in Oracle Cloud

Transform using the most cost-optimized and easiest to use Exadata ever

- Same extreme performance, security, availability and scalability as on-premises
 - Same Exadata Hardware
- Standardize with converged Oracle Database
 - 100% compatible with on-premises
- Cloud economics, automation, and operations
- In Oracle Public Cloud or in your Data Center
- Co-managed or fully autonomous
 - Exadata Database
 - Autonomous Database

Exadata Cloud@Customer

Exadata – Choice of deployment

On-Premises Traditional	Cloud at Customer	Public Cloud
<p>Exadata Database Machine</p>  <p>Customer Data Center Purchased Customer Managed</p>	<p>Exadata Cloud@Customer</p>  <p>Customer Data Center Subscription Oracle Managed</p>	<p>Exadata Cloud Service</p>  <p>Oracle Cloud Subscription Oracle Managed</p>

IDC Research Confirms **Exadata Cloud@Customer** Business Value

256% return
on investment
(5-year period)

73% less
unplanned
downtime

47% reduced
total cost of
operations

40% faster
time-to-
market

Exadata Platform Global Fortune 100 Adoption

Exadata Platform	87%
-------------------------	------------

Exadata	86%
Exadata Cloud	44%

Fortune-100 – August 2021 update

A Modern Data Platform

Development Services

Node.js, **Python**, .NET, **Java**,
PHP, Ruby, PL/SQL, C, C++,
Perl, Go, EBR, REST Services,
Micro services, **APEX**,
SODA, Docker

Platform Services

Cloud to On-Prem,
Clustering, Sharding,
Security, High Availability,
Zero Data Loss,
Administration

Analytical Services

SQL, R, Columnar In-Memory, Advanced Analytics, **Machine Learning**, AI

Data Support

Relational, JSON, XML,
Spatial, Graph, RDF, **Text**,
Binary, Object Stores, HDFS,
Kafka, **NoSQL Stores**

Infrastructure Services

Public Cloud, Cloud at Customer, **Exadata**,
BDA, ZDLRA

**Next Generation Data
Management Platform**

Thank You
